

# Metering system DULCODOS® universal mini PE

Metering system for chemicals: compact, reliable, ready to connect

## Pump volume up to 45 l/h depending on the selected pump with a back pressure of 10 - 2 bar

The DULCODOS® universal mini PE is ready to connect at delivery, and can be integrated easily into the existing process due to its compact footprint.

Pre-configured components tailored precisely to the application ensure that it is reliable to operate.

The compact metering system can be supplied with a solenoid-driven metering pump from the Beta® or gamma/ X ranges.

Due to its small dimensions, the system can be integrated into almost any installation, commissioning is easy to perform and operation is also uncomplicated.

Thanks to its pre-defined components, the system is cost-effective with a short delivery time, thanks to its pre-defined components.

## Your benefits

- Compact and clearly arranged design
- Stable, one-piece rotationally sintered PE frame
- Reliable and safe metering of liquid chemicals with proven ProMinent solenoid-driven metering pumps and peristaltic pumps
- Safe operation, thanks to relief valves and retaining tank
- Calibration tanks with priming function for precise metering
- Optional: pulsation damper, splash guard

## Field of application

- Cooling water treatment
- Waste water and process water treatment
- Paper industry
- Food industry
- Beverage industry
